

**LANDAU UK SHOWCASES LATEST FUEL PURIFICATION SYSTEM**

*Skipper Expo, 30<sup>th</sup> & 31<sup>st</sup> October 2015*

Originally tested in the haulage and plant industry and now well received into the marine industry in 2013 by commercial boat builders, Landau UK is proud to be showcasing the latest Fuel Purification System, a great addition to a Fisherman's vessel.

MLS Fuel Purifier

The MLS Fuel Purifier is designed to remove both water and solid particulates from even the dirtiest, most contaminated fuel, prolonging an engine's life.

Engine benefits:

- Avoid fuel/water related breakdowns
- Maintain exhaust emission standards
- Extend engine rebuild and life
- Remove solid/semi solid contaminants such as dirt, rust and sludge

Major environmental benefits:

- Cleaner engine combustion
- Save on paper consumables as the Fuel Purifier is filter-less
- Significantly extend the life of the standard fuel filter
- Fewer unscheduled repairs and calls outs

Installed between the fuel tank and the primary fuel filter/water separator, the MLS Fuel Purifier acts as the first line of defence by removing water, dirt, sludge and grit.

#### **Notes to editor**

Whether you need an urgent repair or a carefully budgeted fleet maintenance program, Landau UK have fully trained and qualified technicians and engineers available to solve any maritime issues quickly and efficiently.

From the fairing and spraying of hulls, through to fuel purification systems designed to extract every last horsepower from every last drop, it's the kind of attention to detail that pays for itself over and over.

But it's not just about making your vessels run better, it's about configuring and equipping them to maximise their potential, minimise costs and ensure safety at all times.

From thermal imaging to the latest in ROTINOR commercial and military dive propulsion systems, Landau UK will be exhibiting their latest products and services on stand 36 at the Skipper Expo on 30<sup>th</sup> & 31<sup>st</sup> October.
